

Srinivas Muralidharan

Date of birth: 24/01/1996 • **Address:** Postjesweg 147P 1062JN, 3rd Floor, Amsterdam, Netherlands •
Phone number: +31 620626523 • **Email address:** sm1043@gmail.com

Data Engineer and Scientist with a robust engineering background and around five years of experience delivering data solutions across finance, FMCG, and healthcare. Skilled in building, deploying, and monitoring data pipelines using PySpark, Databricks, and Azure, focusing on scalable, production-ready pipelines and applying DevOps and CI/CD practices. Experienced in Natural Language Processing and Knowledge Graphs, turning complex data into actionable insights. Passionate about innovation and improving data landscapes to drive business value and insights.

Work Experience

02/2024

Amsterdam,
Netherlands

Data Engineer / Scientist AniCura

- Helped establish a mature engineering and DevOps/MLOps workflow within a cross-functional data team by introducing Git best practices, supporting DevOps, and automating CI/CD for Data and ML pipelines.
- Built and optimized scalable ETL and ML data pipelines on Azure and Databricks, contributing to marketing, operations, and customer data domains, leveraging PySpark and SQL.
- Led the Referral Project, designing and deploying ETL pipelines and BI dashboards used by stakeholders across Europe to monitor referral flows, increasing visibility into clinic collaboration and referral revenue by 32%.
- Owned the Consent Management Project, architecting and delivering a customer data matching and analytics solution between Salesforce and internal systems, improving marketing targeting accuracy by ~45%, and enabling insights into over 160,000 clients.
- Developed, deployed, and monitored machine learning models, including NLP and classification models (using Hugging Face transformers and Python), achieving >90% accuracy in classifying product records consistently across 8+ countries.
- Prototyped and productionized topic clustering models to extract insights from unstructured data, enabling stakeholders to understand key themes and patterns for operational and strategic decision-making.
- Migrated local Google Maps web scrapers to a distributed Databricks environment, reducing processing time from 18 hours to 7 hours per day, saving in compute costs and improving delivery timelines for data updates.
- Delivered critical bug fixes and performance improvements to pipelines across departments, reducing data delays and increasing system reliability.
- Co-developed an internal Python analytics library with reusable components (e.g., logging, error handling, data I/O), boosting productivity and consistency across the engineering team.

Tech Stack : Azure | Databricks | PySpark | Python | Git | DevOps | Hugging Face | NLP | SQL | MLOps | CI/CD

01/2023 – 02/2024

Amsterdam,
Netherlands

Data and Analytics Specialist FrieslandCampina

- Collaborated with cross-functional teams to design and implement scalable Databricks pipelines, optimizing Power BI gold layer data flows and improving data accessibility for business users.
- Led data validation and root cause analysis across multiple systems, ensuring high data quality and enabling accurate reporting and decision-making.
- Developed and deployed production-grade data engineering pipelines on Databricks and Azure to orchestrate complex workflows efficiently, supporting analytics and ML use cases.
- Developed and Maintained GC Components as part of Data and Engineering Global team to serve Infrastructure for various domain teams for

orchestrating their data pipelines depending on various business use cases.

- Built reusable Python libraries for machine learning workflows, enabling faster deployment and consistent implementation of text classification models (BERT-based), contributing to the organization's DevOps practices.

Technical Skills : Azure | Databricks | PySpark | Python | Git | DevOps | SQL | MLOps | ETL | Library Development | CI/CD

01/2021 – 08/2021
Wageningen,
Netherlands

AI Research Intern (Natural Language Processing) **FrieslandCampina**

- Created a NLP model to classify customer complaints.
- Researched on state of the art NLP and ML models - Word2Vec, BERT.
- Created a Word2Vec model based on Dutch and English customer complaints data.
- Feature engineering and Preprocessing for NLP use case.
- Created an End to End data science pipeline with AWS redshift as source of data.
- Published a white paper in Friesland Campina.

01/2022 – 01/2023
Hoofddorp, Netherlands

Data Specialist **Macaw**

- Create, optimize and maintain ETL Data pipelines to Azure data factory for New York Pizza Finance analytical use case.
- Regularly Collaborate with stakeholders and Power BI developers to develop the Data pipelines from source to data warehouse (MS SQL).
- Migrate existing data pipelines to the new environment in Azure Data Factory.

01/2021 – 11/2023
Chennai, India

Data Solution Specialist, Freelancer **AKCS**

- Researched and developed Tally-based data solutions for medium-scale industries in the financial sector, enhancing analytics capabilities.
- Designed and implemented Python automation scripts and reusable functions to extract and transform Tally data, streamlining analysis and enabling data-driven decisions.
- Prototyped and experimented with LLM/NLP-based Q&A applications, detecting anomalies in user queries and generating contextual responses using large language models.
- Contributed to a proof of concept (POC) for data engineering pipelines leveraging Azure and South Asian Data Lakes, demonstrating scalable architecture for future deployment.

01/2021 – 01/2023
Chennai, India

Data Science Intern **Fast Facts**

- Designed and developed ETL pipelines to extract data from SharePoint and load it into an MS SQL data warehouse, building an ETL automation tool using Azure and Python.
- Created a data model to classify financial statement documents, enabling more structured analysis of unstructured source data.
- Consolidated and analyzed reports based on financial statements, providing actionable business insights.
- Maintained and monitored Azure resources to ensure reliability and cost-efficiency of pipelines.
- Proposed and implemented a proof of concept (POC) for automatic reconciliation across income tax and other financial documents, which was successfully adopted and deployed by the company.

01/2018 – 01/2019
Chennai, India

Quality Assurance Associate **Amazon**

- Involved in the Kindle publishing team.
- Created data quality checks based on the data for kindle publishers and authors.

Work Experience

- Created an internal tool to analyze data based on daily quality checks, which helps the team to focus on vital process points.
- Contributed and handled quality check escalations.
- Contributed towards redesign of the data quality checks

01/2017 – 10/2017
Chennai, India

Data Specialist Intern Tata Consultancy Services

- Create a data pipeline which can retrieve data from Home Depot ecommerce store, contributing to Analytical use cases.

01/2016 – 05/2016
Chennai, India

Developer Newgen KnowledgeWorks

- Gained training and knowledge on Digital marketing.
- Contributed to retrieving data insights based on digital marketing insights.
- Contributed towards the development of app creation and website development for multiple clients.

Projects

Developer Data Engineering Framework

Built a Data engineering framework using Python to extract, transform and load data from Tally source for further analytical and data science use cases for Medium Scale Industries (Financial field).

Researcher Glaucoma Detection

With the help of the Convolution Neural Network, classification is performed on the images/oct scans of the eye. The results depict the probability of a person being affected with a range of glaucoma and are broadly classified into 3 categories namely least affected, mild affected, severely affected.

Researcher RNN Classification

By using the Patients data, classification using a simple Recurrent Neural Network (RNN) was performed and further predicted using unseen dataset.

Architect Azure Financial Reconciliation

Designed and Developed a cost effective Azure architecture to automate the process of financial bank statements reconciliation.

Developer Data Engineering Pipeline

Designed and created a Data Engineering pipeline to Read data from various sources to data warehouse.

Developer NLP and ML Document Classification

Developed an algorithm to classify statements in the document based on Natural Language Processing and Machine Learning.

DevOps MLOPs with Databricks

Developed a CI/CD Pipeline to adapt for continuous integration and deployment of ML models and code changes.

Digital Skills

– TECHNICAL SKILLS

Git

Microsoft Azure

SQL

Object-Oriented Programming

Azure DevOps

Python

Familiar with Azure Environment (Databricks and Datalake)

Natural Language Processing

Machine Learning

Deep Learning

Data engineering

Experienced roles: Data mining, data science, and data engineering

Agile Methodologies (Scrum Kanban)

Knowledge Graph

Databricks Asset Bundles

– INTERPERSONAL SKILLS

Team player, Team Leader

Time management, Analytical thinking, Strategic planning, Self-motivation, Attention to detail

Teaching, explaining

Project Presentation

Education and Training

2019 – 2022
Amsterdam,
Netherlands

Masters of Science, Artificial Intelligence
Vrije Universiteit, Amsterdam

Website <https://vu.nl/nl>

2014 – 2018
Chennai, India

Bachelors of Technology, Computer Science Engineering
SRM Institute of Science and Technology

Website <https://www.srmist.edu.in/>

Honours and Awards

2018

AZ - Azure Fundamentals
Microsoft Azure

2021

Azure Data Engineer Associate
Microsoft Azure

2021

Azure AI Engineer Associate
Microsoft Azure

2021

Azure AI Fundamentals
Microsoft Azure

Honours and Awards

2021	Azure Cosmos DB Developer Speciality Microsoft Azure
2021	Databricks Lakehouse platform Fundamentals Databricks
2021	Generative AI Fundamentals Accreditation Databricks
2021	Data Analytics Johan Cruyff Institute

Publications

2018	Sentimental analysis based review classification
2021	Extracting key aspects of Consumer Complaints using Text Classification Techniques • This is a white paper publication within the organization. Hence, it is confidential. However for reference, reach out to Vidya Ranade in the recommendation list.

Recommendations

Vidya Ranade

Srinivas did his internship at FrieslandCampina in my group. The focus was his work was on analyzing text data gathered from consumers. Srinivas is very eager to learn new technologies and try them out in practice. In a very short time, he familiarized himself with the analytics tools / stack used at FrieslandCampina, and applied cutting edge text analytics techniques such as word2vec to our data producing some really insightful results. Srinivas is hard working, dedicated to deliver results, and a team player. I am certain that he will add value to any organization that he works in, and highly recommend him for an AI / data science / data engineering position.

Abhishek Deveraj

Srinivas is an encyclopedia of knowledge when it comes to AI and data science. we collaborated on a few projects and found him to be a great team player with a strong knowledge base. A great hire for any company

Chenglong Deng

Srinivas is fast-reacting, he has been providing clear and easy-understanding explanations on the internship project, which helps me with getting familiar with both the project and related concepts soon

Ramya Ragu

Under Srinivas Muralidharan's expert supervision, I thrived in the field of Artificial Intelligence achieving best paper award at a national conference [NCTS'23] on the personalized clinical support system using natural language processing and deep learning techniques. His insightful guidance combined with his passion towards exploration and learning significantly contributed to my academic and personal growth.
